

Software requirement specification document for content management project for tourism agency

Ramez Nabil

Khaled Nader

Nour Eldeen Mohamed

Ahmed Mohamed Salah

Supervised by: Dr.Essam Eliwa

Version 1.8

May 9, 2020

1 Introduction

1.1 Document versions

Version 1	creating the SRS
Version 1.1	updating the Introduction (purpose of the document,scope of the document,overview,business context)
Version 1.2	updating general description (product functions ,user characteristics)
Version 1.3	creating ERD diagram and class diagram
Version 1.4	creating functional requirements (user)
Version 1.5	updating functional requirements - creating whole system functions
Version 1.6	creating user cases and creating the User interface -updating GUI and operational scenarios
Version 1.7	refining functional requirements and updating the verbs to include shall and should
Version 1.8	adding citations , references and uploading ERD diagram and class diagram
GitHub link	https://github.com/Ramez007/Tourism-Project

1.2 Purpose of this document

The purpose of this document is to present a detailed description of a Tourism Company content management web application. It shall explain the purpose and features of the system, the interfaces of the system, what the system shall do, the constraints under which it shall operate and how the system shall react to external stimuli. This document is intended for both the stakeholders and the developers of the system.

1.3 Scope of this document

This Software Requirements Specification is to create a fully functional web application for viewing and booking travelling packages which include hotel and services. This shall target users like travellers with little to no experience in booking procedures, The system shall also help the company organize the workload and deal with it more efficiently since paperwork will be close to none.

1.4 Overview

The web application is created to allow clients to view and book packages and to track their date. Also if users would like to check for a certain hotel's availability within a time frame which the user chooses. Furthermore, The web application lets the support center operator deal with guests and users enquiries about the trips,packages and hotels reservations. The Ministry of Tourism offers set of regulations and constraints on the managing the tourism process like having permit to the employees to enter the airport and meet the guests also, having experience certificate to interact with guests. The tour guide shall have language certificate to be able to perform the explaining the history of the memorials and museums in Egypt [4].

1.5 Business Context

Speedo Tours is an organization with license no. 782 from the Egyptian ministry of tourism and is building an excellent name in the field of tourism. the most important aspect of tourism is a good customer service . At Speedo Tours they offer professional service with a unique flair and a touch of the traditional hospitality for which the Egyptian people are known by. They treat all their guests as VIP and strive to make their visit to Egypt a remarkable and memorable one. Since 2011 the tourism in Egypt was unstable as the number of tourists visiting the country has drastically declined, mainly in response to international travel alerts and warnings by many Western governments [1]. Speedo Tours was and still trying to promote Egypt as a touring hot spot and a must see place and helps this by promoting packages and the best deals to different hotels in Egypt and different hot spots during the visit. Also, Speedo tours focuses on also domestic tourism by offering budget hotels as primary findings reveal that the budget hotel location, cleanliness, maintenance, comfort level, hotel staff service, value for money room rates and food and beverage values are among the significant factors that influence domestic tourist satisfaction[3].

2 General Description

2.1 Product Functions

1. Guests shall login or register to the system. Also sign in with google option is available.
2. Guests shall edit their profile from their perspective profile pages.
3. Guests shall view existing packages and hotels with their services.
4. Guests shall book any hotel or package ,track the reservation, cancel reservation, view their reservations history and current view reservation status.
5. Guests shall cancel desired reservation.
6. User and Guest should send an enquiry regarding his experience with the website or regarding his reservation and it's status in the support center page.
7. User shall see reviews on packages and hotels.
8. Support Operator shall reply to messages and enquiries from guests and users.
9. Support Operator shall send news wire to subscribed emails on the system.
10. Support Operator shall send emails to particular guests.
11. Admin shall edit every page's content including the text,images and services offered by hotel/package and also add,suspend packages/hotels.
12. Admin shall confirm books requested by guests.
13. Admin shall add new pages to the website by adding hotels or packages.

2.2 Similar System Information

Many Tourism Companies offer great experience in managing and financing the tourism industry and making Egypt a better place to travel. These agencies motivate the new generation to implement their skills in this field. One of the leading tourism agencies in Egypt is Travco. Travco seeks to improve the tourism industry by finding new strategies to improve the travel process and making sure the guest enjoys his/her stay in our country. Our system shall be similar to that of Travco's [5]. Also another leading agency is Flash Tours which poses one of the fine transportation and programs for guests in lower Egypt [2]. Our system is intended to be standalone system not be used as a component in a bigger project.

2.3 User Characteristics

1. Guest/User:
 - Shall have basic knowledge of using web browsers and navigating through web applications.
2. Support Center Operator:

- Shall have basic knowledge of using web browsers and forum threads.
- Shall have username and password to login to the website.

3. Admin:

- Shall have a basic understanding of the layout of the website.
- Shall have username and password to login to the website.

2.4 User Problem Statement

Being able to correctly reserve the desired package/hotel without risking conflict or loss of data due to it being stored on paper forms, And being able to reserve without being present at the reservation office.

2.5 User Objectives

Guests/Users successfully book desired packages/hotels and track it's progress remotely, And being able to submit reviews/inquiries on the reserved package/hotel.

2.6 General Constraints

A user should have a reliable internet connection to be able to access the web application. A user should have a bank account with sufficient credit to book the package/hotel. An admin should be aware of the business context and it's process. The support center operator should reply to every enquiry requested by clients.

3 Functional Requirements

3.1 User

3.1.1 FR 1

Function Name	Register
Description	This function shall register the client into the system by filling his/her data into the database
Input	FirstName, LastName , Email , Password , Gender, Country
Action	Add user to the database
Output	Login Page
Precondition	All fields are filled correctly
Post-condition	Redirect to the login page and update the database with a new record
Dependencies	None

3.1.2 FR 2

Function Name	Log in
Description	The client shall log in into the system through this function
Input	Username , Password
Action	Verify that the user exist in the database then retrieve user from the database
Output	Profile Page, Acceptance message or error message
Precondition	All fields are filled correctly
Post-condition	Redirect to the profile page
Dependencies	FR1

3.1.3 FR 3

Function Name	Log in with google
Description	The client shall log in with google into the system through this function
Input	Credentials Retrieved from google API
Action	check if email retrieved from google API doesn't exist already in the database then insert user in the database
Output	Link to Profile Page, Acceptance message or error message
Precondition	All fields are filled correctly
Post-condition	Redirect to the login page with link to profile page
Dependencies	None

3.1.4 FR 4

Function Name	Edit Profile
Description	The client should be able to edit his data
Input	FirstName, LastName, Email, BankAccountNo., PassportNo, NationalIDNo., Username, Password, Country
Action	gets the input data from guest and updates the database
Output	Acceptance message or error message
Precondition	None
Post-condition	Return to Edit Profile Tab
Dependencies	FR2 or FR3

3.1.5 FR 5

Function Name	Cancel Hotel Reservation
Description	The client should be able to cancel his/her hotel reservation
Input	HotelID, ReserveID, Check in Date, Check Out Date
Action	Removes the reserve from the database
Output	Acceptance message or error message
Precondition	None
Post-condition	Return to Reservations Tab
Dependencies	FR2 or FR3

3.1.6 FR 6

Function Name	Cancel Package Reservation
Description	The client should be able to cancel his/her Package reservation
Input	PackageID, ReserveID
Action	Removes the reserve from the database
Output	Acceptance message or error message
Precondition	None
Post-condition	Return to Reservations Tab
Dependencies	FR2 or FR3

3.1.7 FR 7

Function Name	Booking hotel
Description	This function shall book a hotel for the logged in user using his credentials
Input	GuestID , HotelID, number of rooms, boardtype , number of persons, date
Action	Assign the reservation with the logged in guest's credentials
Output	Acceptance message or error message
Precondition	The hotel shall have available rooms
Post-condition	The system saves the reservation in the database
Dependencies	FR2 or FR3

3.1.8 FR 8

Function Name	Booking package
Description	This function shall book a package for the logged in user using his credentials
Input	GuestID , PackageID, number of rooms, boardtype , number of persons
Action	Assign the reservation with the logged in user's credentials
Output	Acceptance message or error message
Precondition	The package should have available places
Post-condition	The system saves the reservation in the database
Dependencies	FR2 or FR3

3.1.9 FR 9

Function Name	Subscribe to news wire
Description	This function should save the guest or user email to receive news
Input	Email
Action	Saves the email in the database and prompts a confirmation message
Output	Confirmation or error message
Precondition	Check if Email field is empty
Post-condition	The system saves the email in the database
Dependencies	None

3.1.10 FR 10

Function Name	Send inquiry
Description	This function shall let the user to write an inquiry about a package or a hotel reservation and the inquiry is sent to the support operator
Input	Name,Email,Message
Action	Sends the message to the support operator and saves it in the database
Output	Confirmation or error message
Precondition	None
Post-condition	None
Dependencies	None

3.1.11 FR 11

Function Name	Review Hotel
Description	This function shall add a review of a hotel
Input	Review,HotelID
Action	The system saves the review in the database
Output	Confirmation or error message
Precondition	None
Post-condition	Post the review to the hotel's page
Dependencies	FR2 or FR3

3.1.12 FR 12

Function Name	Review Package
Description	This function shall add a review on a certain package
Input	Review,PackageID
Action	The system saves the review in the database
Output	Confirmation or error message
Precondition	None
Post-condition	Post the review to the package's page
Dependencies	FR2 or FR3

3.1.13 FR 13

Function Name	Check Availability
Description	This function shall check the availability of the selected hotel
Input	HotelID
Action	Checks all available rooms for the selected hotel
Output	Shows number of available places
Precondition	The function checks for the available rooms in the hotels within the time frame selected through the data collected in the database
Post-condition	Prompts user if the selected time frame is available in the hotel
Dependencies	None

3.1.14 FR 14

Function Name	Reply to Inquires
Description	This function shall send the reply of the inquiry to the user
Input	SupportID,Reply,Email
Action	Send the reply to the designated email and saved the enquiry and its reply in the database table "Inquiry History"
Output	Confirmation or error message
Precondition	Existence of Inquiries in Database
Post-condition	None
Dependencies	FR2

3.1.15 FR 15

Function Name	Send News-wire
Description	This function shall send the news to the Users
Input	Users emails,Email Content,SupportID
Action	sends news to the guest by email and saves the email in news wire history table in database
Output	Confirmation or error message
Precondition	Subscribed Emails
Post-condition	None
Dependencies	FR2

3.1.16 FR 16

Function Name	Send Package Mail
Description	This function shall send mail to guests enrolled in a certain package
Input	Email,Guests Emails
Action	sends email to the guests
Output	Confirmation or error message
Precondition	enough guests enrolled in the package
Post-condition	None
Dependencies	FR2

3.1.17 FR 17

Function Name	Send General Mail
Description	This function shall send mail to any guest exists the database
Input	Email text,Email of guest
Action	sends email to the guest
Output	Confirmation or error message
Precondition	guest email saved in database
Post-condition	None
Dependencies	FR2

3.1.18 FR 18

Function Name	Add Package
Description	This function shall make the admin add a new package
Input	CruiseID, name, No. OF days, No. of Nights, Reserve Limit, Package Price, Start Date, End Date, Transport, Tour Guide, Tour Map, Board Type, HotelID, Overview, Description
Action	The system saves the value of fields in the database
Output	Confirmation or error message and shows the added package on the website
Precondition	None
Post-condition	Show the package on the website in the package's page and creates a seprate new page for the added package
Dependencies	FR2

3.1.19 FR 19

Function Name	Edit Package
Description	This function shall edit the package details
Input	PackageID, CruiseID , Package Name , No.of Days , No.of Nights , Reserve Limit , Package Price , Start Date , End Date , Transportation , Tour Guide , Map , Boardtype , HotelID , Overview , Description
Action	Updates the database entry with the inserted data in the fields
Output	Conformation or error message
Precondition	None
Post-condition	The Updated fields are shown on the package's page
Dependencies	FR2

3.1.20 FR 20

Function Name	Suspend Package
Description	This function shall suspend the package
Input	PackageID
Action	The Package is suspended and removed from the packages page
Output	Confirmation or error message
Precondition	None
Post-condition	Removes the package from the packages page
Dependencies	FR2

3.1.21 FR 21

Function Name	Add Event
Description	This function shall add event to the blog page
Input	Event Title ,Event Month ,Event Year ,Event Text
Action	Inserts into the database the new event
Output	Confirmation or error message
Precondition	None
Post-condition	The system shows the event on the blog page
Dependencies	FR2

3.1.22 FR 22

Function Name	Edit Event
Description	This function shall edit an event in the blog page
Input	Event Title ,Event Month ,Event Year ,Event Text
Action	Edits into the database the data of selected event
Output	Confirmation or error message
Precondition	None
Post-condition	The system posts the edits of the selected event to the blog page
Dependencies	FR2

3.1.23 FR 23

Function Name	Suspend Events
Description	This function shall make suspend events found in blog page
Input	Event IDs
Action	Turn Suspended Field in database into enabled for each event selected by the admin
Output	Conformation or error message
Precondition	At Least one event in the database
Post-condition	Events are removed from the blog page
Dependencies	FR2

3.1.24 FR 24

Function Name	Add Hotel
Description	This function shall add a hotel to the database with its data
Input	Hotel name ,List of Services ,Number of Rooms , Location of Hotel ,Price of each room type ,Description ,Overview ,Stars
Action	The system saves hotel and its data into the database
Output	Conformation or error message
Precondition	None
Post-condition	Posts the hotel with its data to the system interface
Dependencies	FR2

3.1.25 FR 25

Function Name	Edit Hotel
Description	This function shall edit a hotel data and update it to the database
Input	Hotel name ,List of Services ,Number of Rooms , Location of Hotel ,Price of each room type ,Description ,Overview ,Stars
Action	The system saves the updated hotel and its data into the database
Output	Conformation or error message
Precondition	Hotel Recorded in database
Post-condition	updated the hotel data in the database and posts to the system interface
Dependencies	FR2

3.1.26 FR 26

Function Name	Suspend Hotels
Description	This function shall suspend the desired hotel
Input	Hotel IDs
Action	update the suspended field to enabled in the database for the selected hotels
Output	Conformation or error message
Precondition	Hotels Recorded In Database
Post-condition	The hotel is removed from the list of hotels available in the hotels page
Dependencies	FR2

3.1.27 FR 27

Function Name	Edit Main Page Slider
Description	This function shall edit the main slider of the main page and outputs the selected three hotels
Input	3 Hotel IDs
Action	updates the selected hotels feature main slider field in the database to true instead of false
Output	Confirmation or error message
Precondition	At Least 3 Hotels in Database
Post-condition	The system updates the main page slider with the three selected hotels by the admin
Dependencies	FR2

3.1.28 FR 28

Function Name	Edit Main Page Featured Hotels Section
Description	This function shall edit the Featured of the main page and outputs the selected three hotels
Input	3 Hotel IDs
Action	updates the selected hotels feature field in the database to true instead of false
Output	Confirmation or error message
Precondition	Hotels Recorded In Database
Post-condition	The system updates the featured hotels section in main page with the selected hotels by the admin
Dependencies	FR2

3.1.29 FR 29

Function Name	Upload Gallery
Description	This function shall post the uploaded gallery to the package or hotel page
Input	list of images
Action	Uploads the selected images to the database
Output	Confirmation or error message
Precondition	None
Post-condition	The system posts the gallery to the hotel or package page
Dependencies	FR2

3.1.30 FR 30

Function Name	Confirm Reserve
Description	This function shall confirm the reserve of the guest selected by the admin
Input	Reserve ID, Guest Email
Action	Updates and confirm the reserve made by the guest by Turing the suspended field from disabled to enabled in the reserves table in the database
Output	Confirmation or error message
Precondition	The guest shall have a reserved hotel or package
Post-condition	the reserve is confirmed in the profile page of the guest and a confirmation mail is send to the guest
Dependencies	FR2

3.1.31 FR 31

Function Name	Show Reviews of Hotel
Description	This function is a polymorphic function that shows the reviews of hotels in their perspective pages. It also shows all the reviews of hotels made by all the guests in Admin's page
Input	None
Action	retrieve the reviews of the object from the database
Output	None
Precondition	Hotel Recorded In Database
Post-condition	Shows the reviews of the guests in the admin page either a package review or hotel review
Dependencies	FR2

3.1.32 FR 32

Function Name	Show Reviews of package
Description	This function is a polymorphic function that shows the reviews of packages in their perspective pages. It also shows all the reviews of packages made by all the guests in Admin's page
Input	None
Action	retrieve the reviews of the object from the database
Output	None
Precondition	Package Recorded In Database
Post-condition	Shows the reviews of the guests in the admin page either a package review or hotel review
Dependencies	FR2

3.1.33 FR 33

Function Name	Edit Reviews Shown in Main Page
Description	This function shall edit the 3 reviews shown in page
Input	Reviews IDs
Action	retrieve the 3 reviews selected by the admin and updates the reviews section in main page
Output	Confirmation or error message
Precondition	Guests Made Reviews on Hotels or Packages Previously
Post-condition	the 3 selected reviews by the admin are shown in the reviews section in main page
Dependencies	FR2

4 Interface Requirements

The user shall choose from various hotels and packages offered by the company and select/book package for his desired trip, Then the user shall track the package/booking status through the web application's interface and be able to communicate with the employees from the company in case of inconvenience.

Description

The Sofitel Winter Palace Hotel, also known as the Old Winter Palace Hotel, is a historic British colonial-era 5-star luxury resort hotel located on the banks of the River Nile in Luxor, Egypt, just south of Luxor Temple, with 86 rooms and 6 suites.

The hotel was built by the Upper Egypt Hotels Co, an enterprise founded in 1905 by Cairo hoteliers Charles Baehler and George Nungovich in collaboration with Thomas Cook & Son (Egypt). It was inaugurated on Saturday 19 January 1907, with a picnic at the Valley of the Kings followed by dinner at the hotel and speeches [1] The architect was Leon Stienon, the Italian construction company G.GAROZZO & Figli Costruzioni in Cemento Armato, Sistema SIACCI brevetato. During World War I the hotel was temporarily closed to paying guests and employed as a hospice for convalescing soldiers. A regular guest at the hotel from 1907 on was George Herbert, 5th Earl of Carnarvon, better known simply as Lord Carnarvon. Carnarvon was the patron of Egyptologist Howard Carter, who in 1922 discovered the intact tomb of Tutankhamun. After the discovery was announced the Winter Palace played host to the international press corps and foreign visitors there to follow the story. Carter used the hotel's noticeboard to deliver occasional news and information on the discovery. In 1975 the complex was expanded with the construction of the New Winter Palace. The addition, classified as a 3-star hotel, was joined by corridors to the original. It was demolished in 2008. In 1996, the Pavilion, a 4-star annex with 116 rooms, was built in the rear garden of the Winter Palace, close to the swimming pool. The Pavilion shares many amenities with the Winter Palace, including the gardens, pools, tennis courts, terraces and restaurants. The hotel is owned by the Egyptian General Company

The screenshot shows a user profile interface with several navigation tabs at the top: PERSONAL INFO, HISTORY, QUESTIONS AND ANSWERS, and RESERVATIONS. The RESERVATIONS tab is active, indicated by a red underline. Below the tabs, a section titled "Current/Upcoming reservations" displays a single row of information for a hotel booking. The row includes columns for Type of reservation (Hotel), Date in (14/3/2018), Date out (17/3/2018), Notes (Winter Palace, Luxor, 1 Double rooms), and Action (two buttons: Cancel Reservation and Track Reservation). The "Track Reservation" button is highlighted in green.

4.1.2 API

1. PHP Mailer
2. Google Login
3. Google reCAPTCHA

4.2 Communications Interfaces

The communication interface is one of the most important requirements of our software as it will need a connection to the internet or a local host connection.

5 Performance Requirements

Requires adequate internet connection speed.

6 Design Constraints

Any smart device that include any operating system and shall have connection with the internet to deal with the real-time data transfer.

7 Other non-functional attributes

7.1 Security

The system shall secured by encrypting Passwords of the clients. Also the system shall be secured with unauthorized access pages restricting the all users from accessing pages they are not allowed to access.

7.2 Reliability

The system shall be designed to be error free and taking in consideration to secure the sensitive data of the client such as passwords and also the system shall send confirmation on every booking or related action the user makes.

7.3 Maintainability

The system ensures ease of maintainability through the implementation of MVC design pattern. It should be easy to maintain to minimize the amount of changes that would be done to the code.

7.4 Portability

The web application shall work on:

- Google Chrome
- Firefox
- Opera (GX and Mini)
- Safari
- Internet Explorer (Edge)
- Generic browser of android operating system

8 Preliminary Object-Oriented Domain Analysis

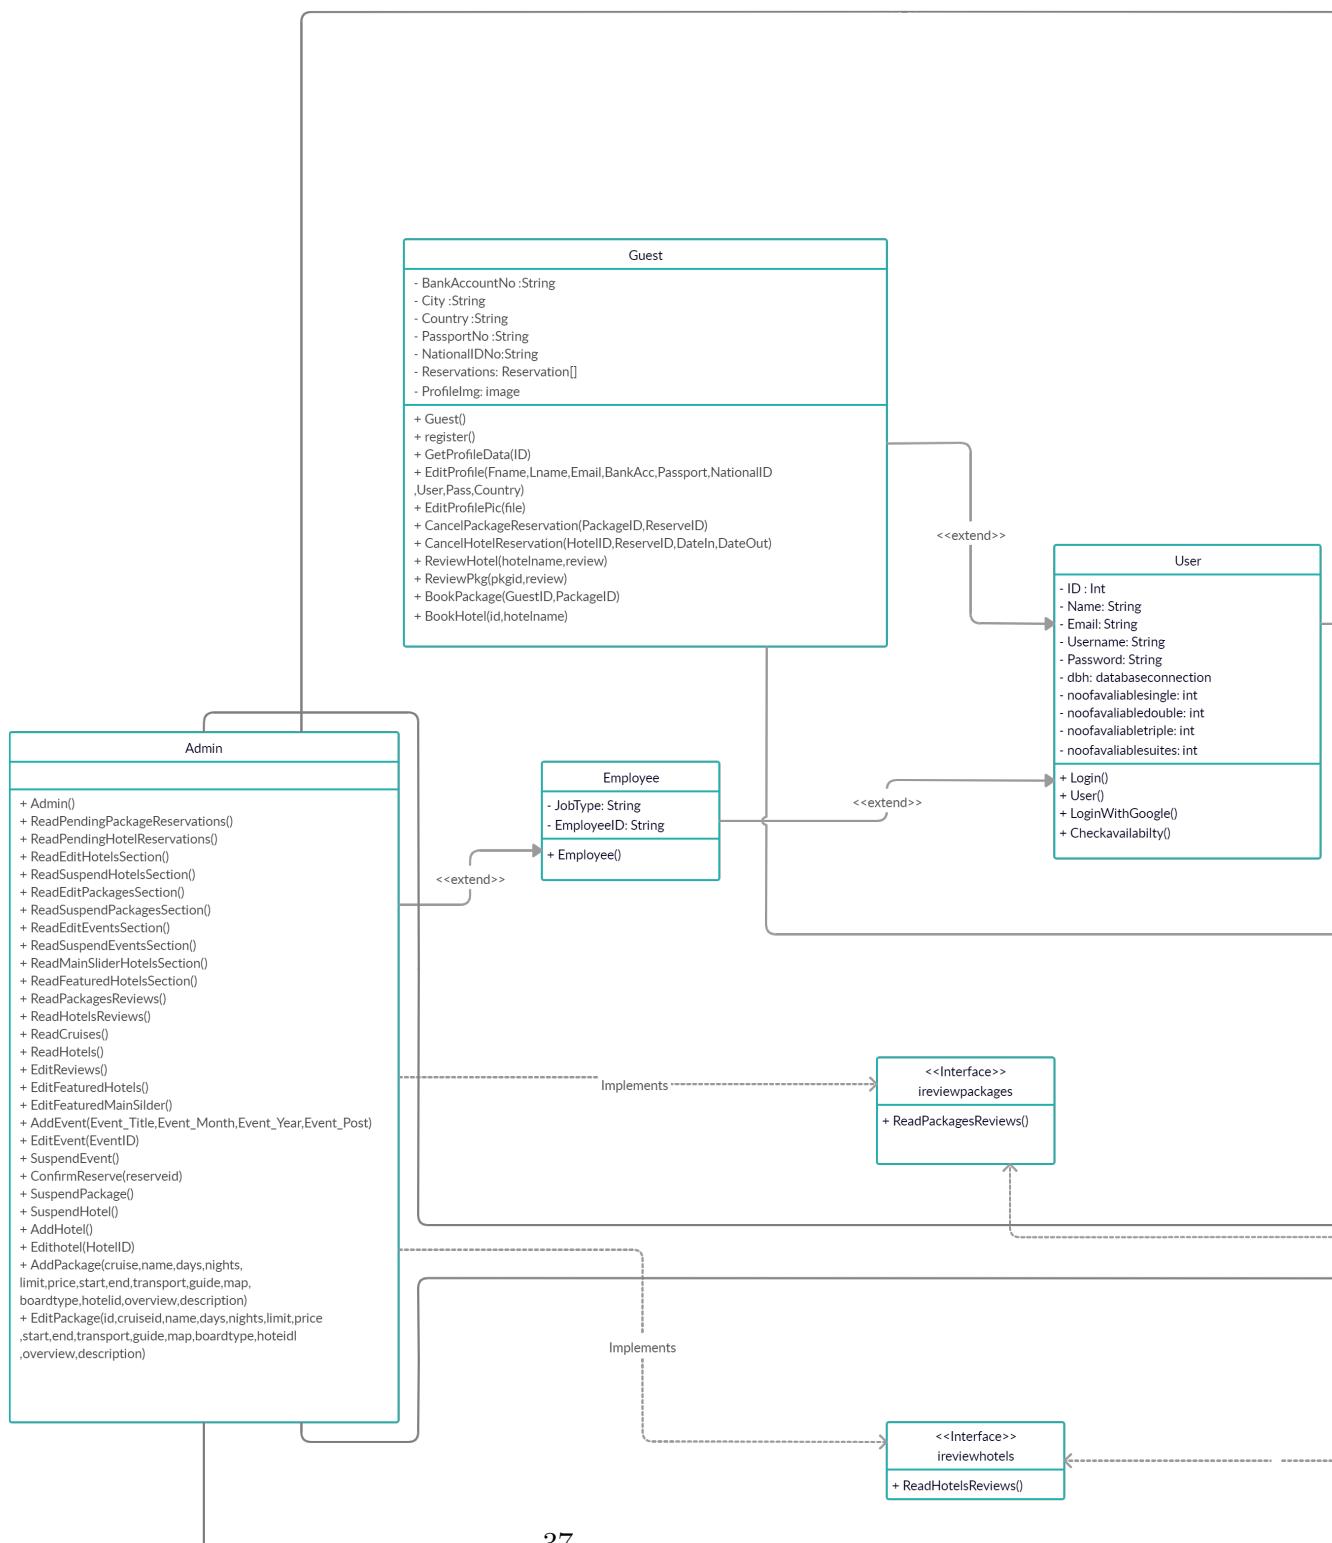

Figure 34: Class Diagram Part One

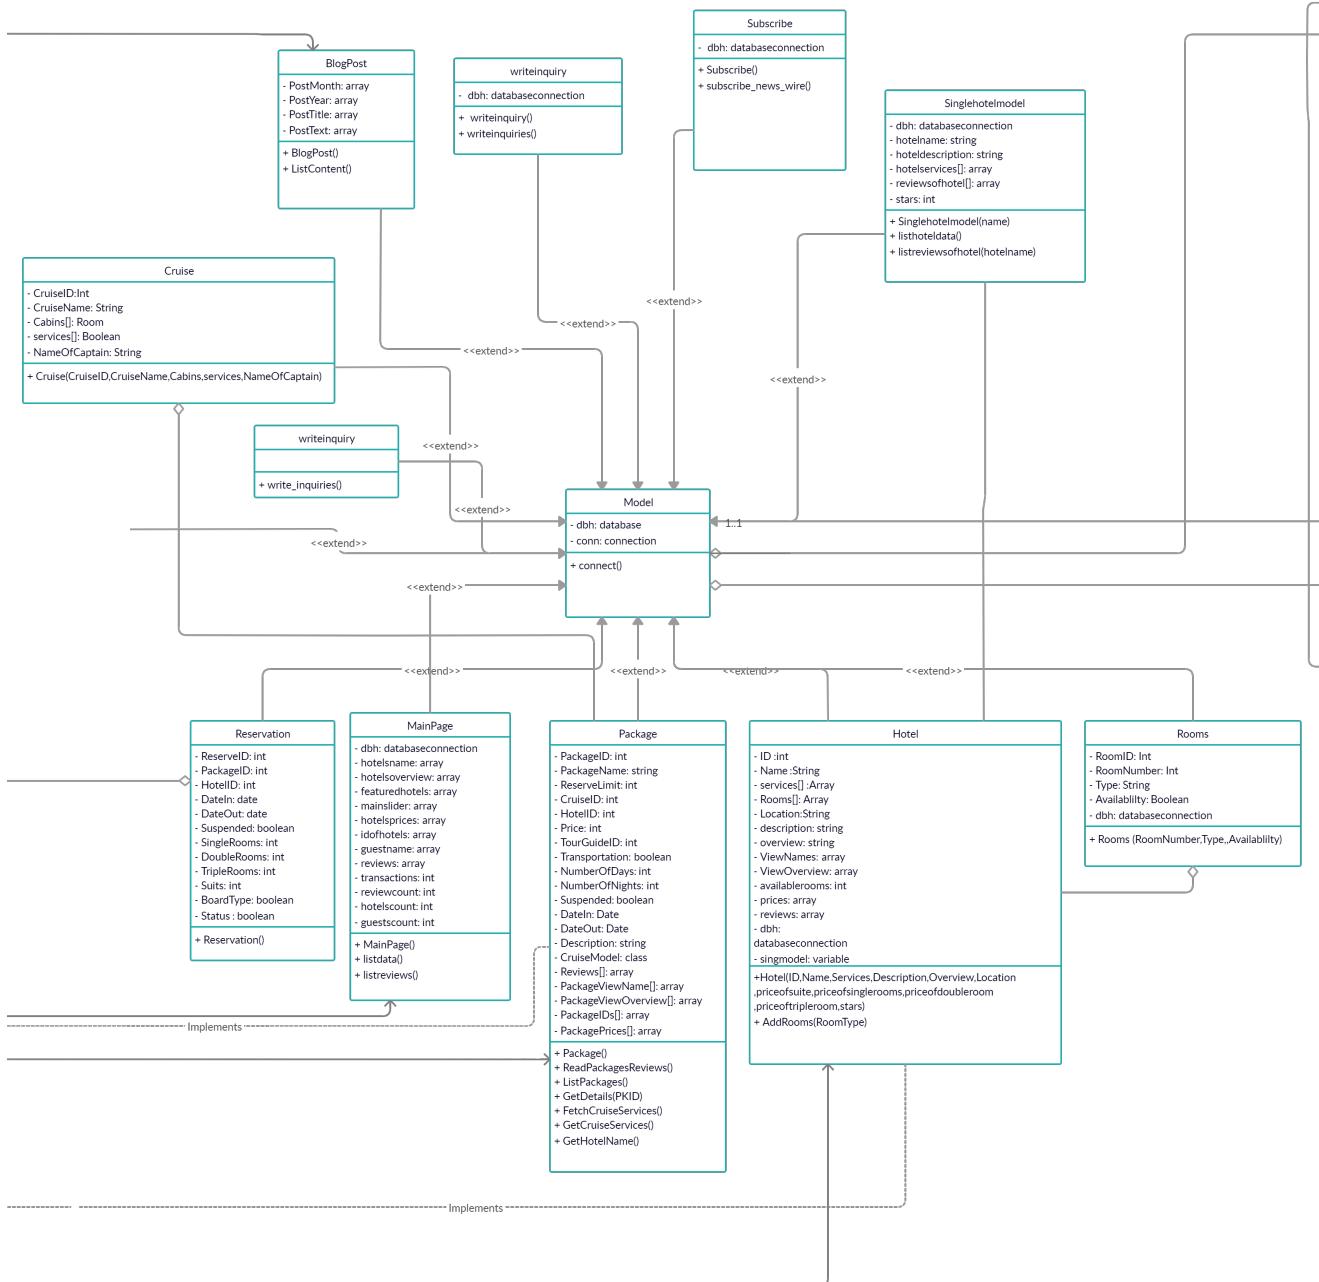

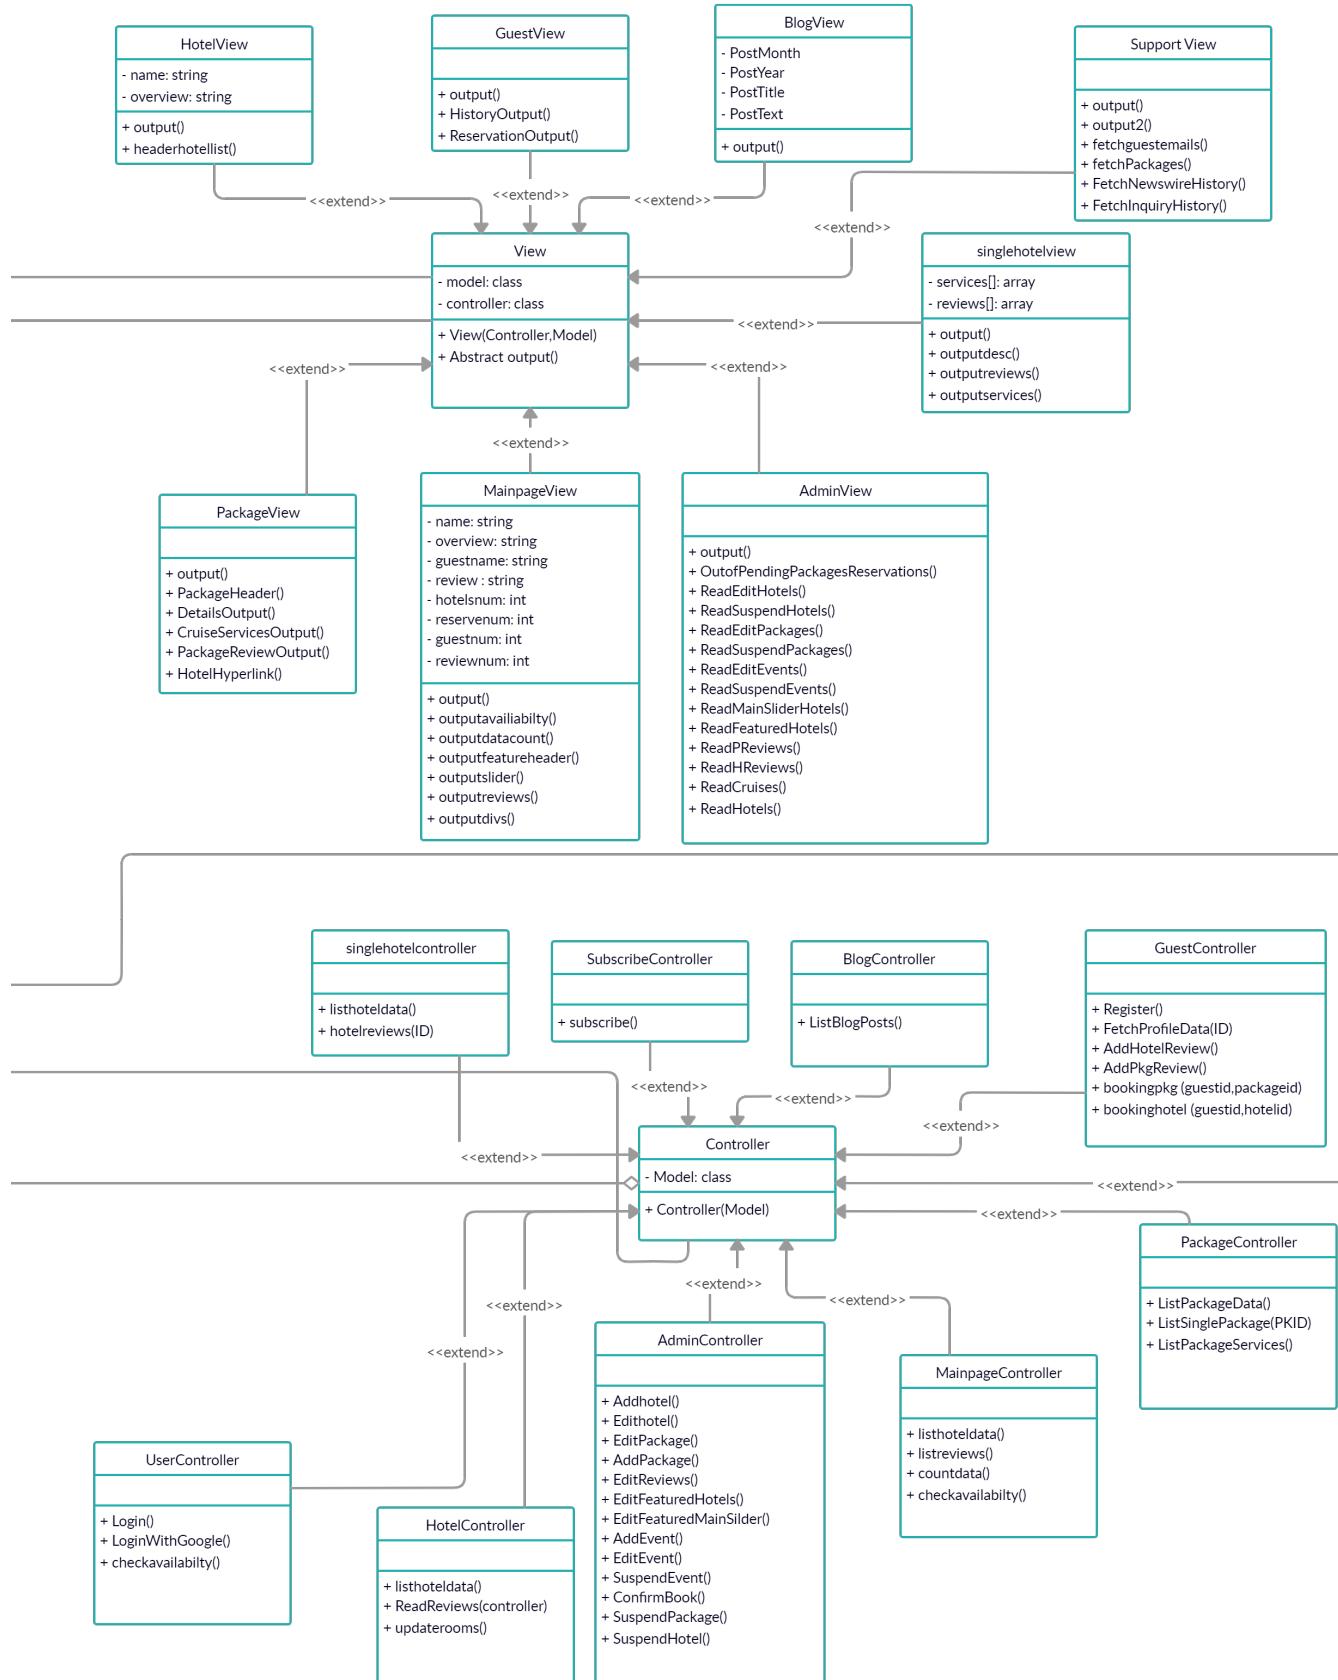

Figure 35: Class Diagram Part Two

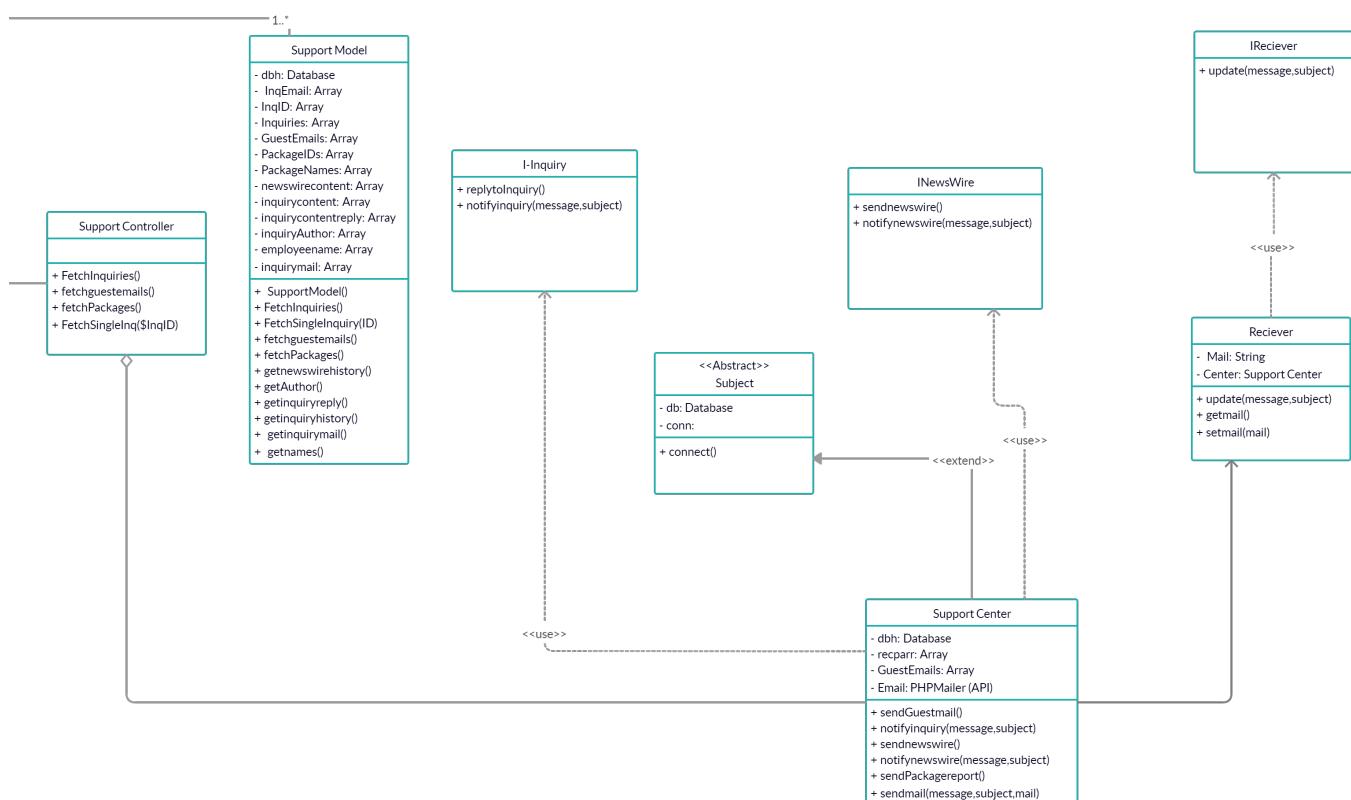

Figure 37: Class Diagram Part Four

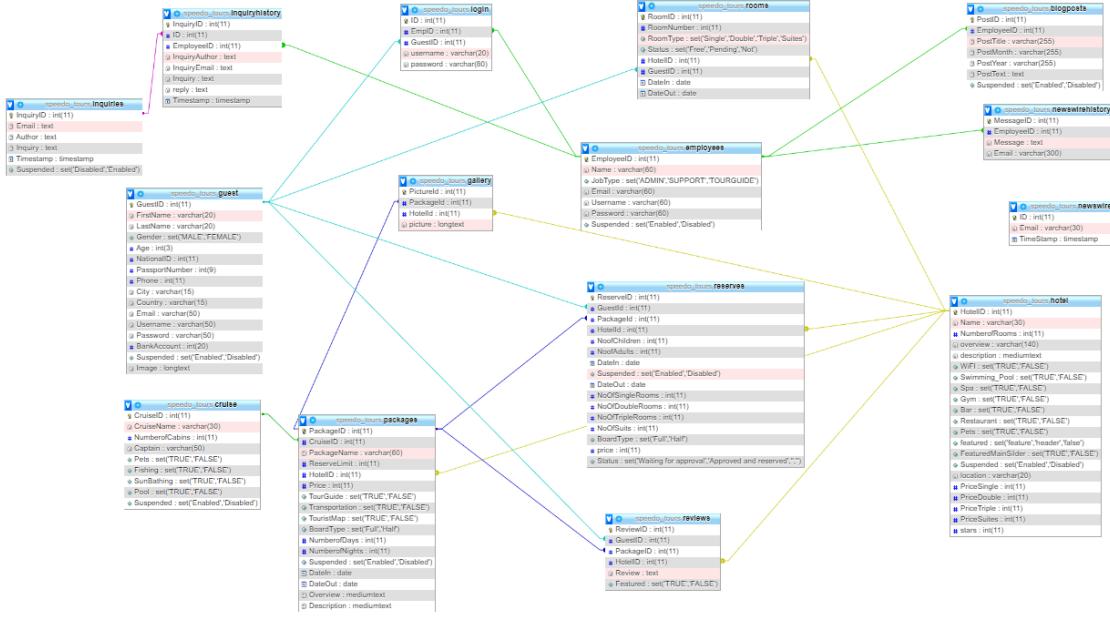

Figure 38: Database Diagram

9 Operational Scenarios

9.1 Scenarios

9.1.1 Scenario 1: User reserves package/hotel

The user shall choose the number and type of rooms and choose the suitable time - in case of a hotel reservation as packages have fixed dates - then the user shall enter personal information to confirm the reservation.

9.1.2 Scenario 2: Admin interaction with offers/packages

The admin shall add offers/packages when desired, edit the offer in case of any changes, suspend the offer if encountered with difficulties with the associated parties with the package and finally confirm reserves of clients.

9.1.3 Scenario 3: Admin interface with the web application contents

The admin shall edit the gallery of photos displayed on the main page, update the sections of featured hotels and best hotels and update the blog page and add,edit,suspend hotels or packages.

9.1.4 Scenario 4: Support Operator interface

The support operator shall receive enquiries regarding certain hotels or packages and shall respond to them. Also, the operator shall be responsible to sending the latest news to the subscribed members of the news wire. Last but not least sending mails to particular guests.
